

Scan2x Solution

Easy. Secure. Reliable.

Scanning just got serious.

Scan2x intelligently recognises different types of documents and processes them in a timely, effective and reliable manner.

This means that your team simply has to walk up to the Scan2x system, scan the document and walk away. The job is done, the document is reliably scanned and it will start its traceable journey to its destination.

The Scan2x Solution

Technology should make your business processes simpler.

And that is exactly what Scan2x has been built to do, by streamlining scanning and document management into one easy-to-use process. It couldn't be easier.

Scan2x presents new-generation scanning technology that's intelligent enough to know what it is scanning.

For instance, if an invoice is scanned Scan2x knows that this needs to be forwarded straight to your Accounts Department for payment to be scheduled. Invoice line items can be extracted and posted into your business application for further processing, and notifications can conditionally be sent to interested parties. All in one streamlined action.

This cutting-edge technology is all about making your documents work harder for you. This will allow your users to get on with running the business, safe in the knowledge that the tedious task of document capture is taking care of itself.

What will Scan2x bring to your business?

Accountability. Wondering how that document got into the system? With Scan2x you will know exactly who has scanned what, at all times. This means your documents can be traced straight back to the person who first captured it, and makes them accountable for its introduction. With businesses facing such stringent regulatory checks today, this will help to make your systems completely transparent and will give you total peace of mind.

Simplicity. Worried about how different members of your team will cope with the addition of a new scanning system? Don't be. Scan2x takes the decision-making out of each scanning process by doing all the thinking for you. All you need to do is select the job you wish to complete and the automatic settings kick in, making the

right scanner settings, reading the correct information from the document and saving to one or more destinations. All automatically.

Customisation. Whatever your business, Scan2x can be built to match. It has been tailored to meet the intricate requirements of a multi-national financial institution, and pared right down to suit the needs of small online start-up.

Fault Tolerance & Bandwidth Optimisation. Document scanning can generate very large files, and saving these to a central location can quickly consume bandwidth. Furthermore, scanning documents as part of your business process creates exposure to process delays due to server or network failure. Scan2x has a built-in output queue that handles infrastructure failure, while award-winning iHQC PDF compression from IRIS achieves up to x50 reduction in scan size.

Cutting-edge features that enhance efficiency. Scan2x can be taught to recognise everything from passports and ID cards to bank statements and invoices, using industry-leading IRIS OCR, Forms Recognition, 1D/2D Barcode Recognition, Cheque MICR functionality and Optical Mark Recognition (for multiple-choice exams, questionnaires, surveys etc). Automated database and web service queries can be used to perform checks in real time.

Scan2x was created out of a need to simplify how users interact with document management systems. By presenting clear buttons that relate directly to business tasks, Scan2x is able to have your documents maximize value and efficiencies in your business.
